

XM Satellite Radio or other type of global information service is becoming more import daily, monthly and yearly. I currently use the national new capability of XM Radio now and I'm looking for to the weather and traffic service in the Seattle Washington area when it becomes available in a few months. I travel across the US and the traffic and weather is useful to me in most of the areas that I travel too. I have installed the XM Radio capability on my boat and will use the weather capability when it becomes available in the Puget Sound area of Washington. No one local radio station provinces this capability. The unrestricted follow of information is key to the growth of are nation. The NAB petition is noting less than a monopoly attempt of this type of information for the befit of a few. The Internet has grown because information flow has not been tax or state controlled.
